(**) - Member States are to ensure that all viruses which have already been isolated in humans and which have not been assessed and allocated in this Annex are classified in Group 2 as a minimum, except where Member States have proof that they are unlikely to cause disease in humans (EU).

(b) - Hepatitis D virus is pathogenic in workers only in the presence of simultaneous or secondary infection caused by hepatitis B virus.

Vaccination against hepatitis B virus will therefore protect workers who are not affected by hepatitis B virus against hepatitis D virus (Delta).

(d) - Recommended for work involving direct contact with these agents

V - Vaccine available

D - List of workers exposed to this biological agent to be kept for more than 10 years after the end of last known exposure (EU).

BL - Biosafety Level

AP - Animal Pathogen

HP - Human Pathogen
